

Digital Skyweb

Technical SEO

1.

Crawling Ability

A search engine must be able to access and read the website page.

2.

Indexing Ability

The search engine will disappear from the search results if the website is not indexed.

3.

Architecture Site

A well-structured website will make it easier for users to understand.

4.

Website Speed

A fast-loading website is most likely recommended by a search engine.

5.

Supported Mobile Device

Users' experience will be enhanced by accessing content on mobile devices.
