

# CUSTARD APPLE

Prefer to grow in full sunlight for at least six to twelve hours.

To deep-level watering when the plant's top 1-inch soil was dry.

Apply any organic manure like cow manure in early spring. To prevent mealy bugs use neem oil in the foliar spray method.

Fruits have a delicious taste and soft creamy white flesh. Best for medicinal purposes to treat diabetes, skin, hair, digestion problems, and cancer.

Trim and thin the branches and maintain plant height.

Love to grow all types of soil especially organically rich well-draining soil.
