

# EMBARK ON YOUR JOURNEY WITH THE ASSURANCE OF PCR TESTING.

## COVID-19

Coronavirus disease (COVID-19) is an infectious disease caused by the SARS-CoV-2 virus. Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. However, some will become seriously ill and require medical attention.

## RSV

Respiratory syncytial (sin-SISH-uhl) virus, or RSV, is a common respiratory virus that usually causes mild, cold-like symptoms. Most people recover in a week or two, but RSV can be serious. Infants and older adults are more likely to develop severe RSV and need hospitalization.

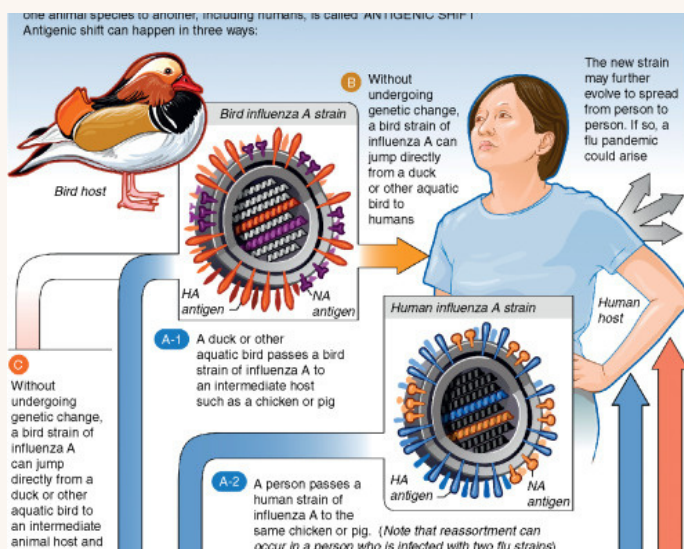

## INFLUENZA-A VIRUS

Flu is a contagious respiratory illness caused by influenza viruses that infect the nose, throat, and sometimes the lungs. It can cause mild to severe illness, and at times can lead to death.

## INFLUENZA-B VIRUS

Influenza B viruses are enveloped, negative-sense single-stranded viruses consisting of 8 genomic RNA segments that code for at least 11 viral proteins

## RT-PCR FOR TRAVEL

RT-PCR tests detect active infection at the exact time you take the test. To minimize the chance of travelers becoming contagious in the days following testing, airlines and destination countries set guidelines as to how close to your departure date you must take your test.
