

Benefits of Dental Implant

www.swanhillsmiles.com.au

Improved Ability to Chew

Dentures might move around in your mouth, making chewing difficult. Dental implants are placed in your jaw like natural teeth, allowing you to eat your favourite foods with confidence and without pain.

Improved Ability to Communicate

Dentures that slip in your mouth can cause you to stammer or slur your words. Dental implants allow you to speak without your teeth moving about.

Increased Comfort

Dentists recommend that you have your dentures realigned now and then and entirely replace them every 5-8 years due to the way your gums change shape over time.

Better Appearance

The crown that goes over your implant is designed to look like your natural teeth. They can bring back your grin and make you feel better about yourself.
