

# STEEL BUILDINGS VS. POLE BUILDINGS

## POLE

Usually constructed with wooden poles and a metal sheeting for the exterior

Good durability, treated wood offers resistance to rot and pests

Faster Construction, simpler design, material fabrication can be done on site.

initially less expensive, but higher maintenance costs

requires more supports and limited spans

## STEEL

Typically made from steel frames and panels

Higher durability, resistant to more weather, resistant to fire and pests.

Sometimes requires more time for fabrication of materials and assembly

initially can be higher cost, but cheaper in the longrun

Can have longer spans between supports
